## KRASO® Special Designs made of stainless steel

### Non-corrosive stainless steel: simple and tight

- + Sealing inserts, casings, flange plates ... We use exclusively non-corrosive stainless steel with the quality seal V2A or V4A for our special designs made of stainless steel. Solutions made of electrogalvanised steel are of course also possible!
- + The production takes place on e.g. the latest laser and waterjet cutting machines!
- + Special designs made of stainless steel are generally ready for dispatch within 24 hours! Direct delivery to the construction site is possible.
- + **KRASO® Special Designs** made of stainless steel are real problem solvers, particularly for rehabilitation projects!

*“Thanks to our manufacturing expertise in stainless steel, we find a suitable solution for every project - even at short notice and fully assembled by our employees.”*

Jens Wenzlaff, application engineer

SPECIAL DESIGNS

## KRASO® Special Designs made of plastic Resistant and low weight

- + Whether drain, floor or wall penetration, pump sump or backwater shaft – **KRASO® Special Designs** made of plastic consist of high-quality components, for example our solid wall, break-resistant and impact resistant KG pipes.
- + Whether new building or rehabilitation: **KRASO® Special Designs** made of plastic offer a lot of advantages compared to other solutions – e.g. low weight and an easy installation!
- + A lot of our numerous special designs include our water pressure tight surrounding **KRASO® 4 Seal**. This is joined monolithically (force-fit) to the solid wall pipe and thus prevents any creep or slippage by pressing water.

*“Plastic is a very versatile material on the construction site. We therefore offer individual solutions for new buildings and rehabilitation - produced and delivered at short notice.”*

Carsten Demming, application engineer

SPECIAL DESIGNS

## KRASO® Special Designs made of concrete

### Precast concrete elements save time and money

- + Pump sumps, cable ducts, lift pits – made of waterproof concrete, produced exactly as per your specifications! All dimensions (width, length, height, wall thickness) are variable.
- + Mounting parts like pipe penetrations, casings or anchor rails (for lift pits) are installed accurately.
- + Weather-independent production of concrete shafts up to a total gross weight of 20 tons - but also pump sumps and lift pits with significantly higher weights can be produced.
- + Saves working time, money and additional drainage! We are happy to advise you personally!

*“We produce precast concrete elements exactly according to the customer’s specifications, regardless of the weather and season. This makes it much easier to plan construction projects - both in regard to deadlines and costs.”*

Michael Schwarz, application engineer
